SUPPLEMENTARY INFORMATION: The purpose of this workshop is to bring together waste-to-energy experts to identify key technical barriers to the commercial deployment of liquid transportation fuels from waste feedstocks, and ultimately develop a roadmap which highlights the key pathways and metrics to meeting this goal. Participants will be led in facilitated breakout sessions to address anaerobic digestion, hydrothermal liquefaction, and other processes from feedstock streams consisting of wastewater residuals, biosolids, foodstuffs, and organic municipal solid waste. These discussions will lead to a roadmap that will be a synthesized output from the information gathered at the workshop.
